Summary

React.js Developer skilled in building responsive, user-facing web applications and translating UI/UX designs into high-quality, production-ready code. Experienced in building reusable, modular components, managing application state and optimizing front-end performance for seamless user experiences. Strong foundation in modern JavaScript (ES6+), component architecture, and mobile-first responsive design. Immediately available and eager to collaborate closely with designers.

Technical Skills

- **Languages:** JavaScript (ES6+), HTML5, CSS3
- **Front-End:** React.js, React Hooks (useState, useEffect, useMemo), React Context API, Component-Based Architecture, Reusable UI Components, Responsive & Mobile-First Design, Bootstrap
- **State Management:** React Context API (production experience), familiarity with Redux Toolkit concepts
- **Front-End Performance:** Re-render optimization with useMemo, dependency-aware filtering, prop-drilling elimination via centralized state
- **Tools & Workflow:** Git, GitHub, Form Validation, UI/UX-to-Code Translation

Projects

E-Commerce Web Application **GitHub | Demo**
React.js, React Context API, JavaScript (ES6+), CSS3

- Translated e-commerce UI/UX designs into a fully responsive React.js application with product browsing, filtering, and shopping cart functionality.
- Architected a centralized global state layer using the React Context API, managing products, cart, filters, and UI toggles across 20+ reusable components without prop drilling.
- Built a dynamic shopping cart system with size/quantity selection, live total recalculation, and real-time validation feedback to improve user experience and reduce checkout errors.

DevConnect – Job Posting & Recruiter Platform **GitHub | Demo**
React.js, useMemo, Component Architecture

- Built a recruiter-facing dashboard with real-time stats (active jobs, drafts, saved jobs, applications) and quick-access navigation to core management actions.
- Implemented a multi-criteria job filtering and live search system – combining skill tags, location, job type, and free-text search – using `useMemo` to optimize front-end performance through dependency-aware re-filtering.
- Designed a Quick Apply flow capturing structured applicant data (contact info, GitHub/LinkedIn/ portfolio links, salary expectations, cover letter) with dedicated recruiter-side review pages, improving end-to-end user experience.

WealthWise – Expense Tracker Dashboard **GitHub | Demo**
React.js, Recharts, Component-Based UI

- Built reusable, responsive UI components with real-time form validation and visual feedback for required fields (description, amount, category).
- Designed and implemented interactive data visualizations (pie chart for category breakdown, bar chart for income vs. expenses) using Recharts to help users interpret spending patterns at a glance.
- Built a dynamic filtering system enabling users to filter transaction history by type and category for faster financial analysis.

Education

Associate Degree Program/ Computer Science 2024 – 2026
Affiliate Superior College *Depalpur, Pakistan*

Achievements

- Independently designed and shipped multiple full-featured React.js applications (e-commerce, recruiter platform, financial dashboard), demonstrating strong end-to-end front-end ownership.
- Built a scalable state-management pattern using React Context API across a 20+ component application without prop drilling.

Additional Information

- **Languages:** English (Fluent), Urdu (Native), Punjabi (Native)
- **Availability:** Immediately available for full-time, internship, or remote positions
- **Currently Learning:** Expanding full-stack capabilities with Node.js
- **Open Source:** 20+ public repositories showcasing React.js and JavaScript projects
